                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 29, Application US/09062451
Patent No. 6444550
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Smith, John M.
APPLICANT: Smith, John M.
APPLICANT: Reed, Steven G.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: TREATMENT AND DIAGNOSIS OF BREAST CANCER NUMBER OF SEQUENCES: 297
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                620;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              COMPUTER READABLE FORM:

                                                                                                                                                                                                                         The invention comprises the amino acid and coding sequences of six human genset metabolic genes (GMG-7A, GMG-7B, GMG-8, GMG-9, GMG-10 and GMG-11). The GMG DNA and protein sequences of the invention are useful for treating or preventing metabolic-related disorders, such as: obesity; impaired glucose tolerance; insulin resistance; Syndrome X; Type II diabetes; hyperlipidaemia; atherosclerosis; hypertension; and heart diseases (e.g. cardiac insulficiency, coronary insulficiency or high blood pressure). The GMG DNA and protein sequences of the invention may also be used as insulin sensitisers - for improving insulin sensitivity in persons with non-insulin dependent diabetes mellitus. The present CDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     οy
                                                                                                                                                                                                                                             The present invention describes primer sets for synthesising 5602

[ull-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dT primer and an oligonucleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
coligonucleotide comprises a least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 3'-end sequence complementary to a
polynucleotide which comprises a 1'-end sequence, where the
oligonucleotide which comprises a 1'-end sequence, where the
oligonucleotide which comprises a 1'-end sequence, where the
oligonucleotide which sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
connected and on additional any specialised methods. AAH13628 and
AAH13613 to AAH13629 to AAH13632
ceptresent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ä,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                510

                                                                                                                                                                                                                       can screening modulators of precursor stem cell differentiation into osteoblasts, or bone tissue deposition;

(b) diagnosing abnormal deposition;

(c) treating abnormal deposition of bone tissue, abnormal rate of osteoblast formation or osteoporsis; or monitoring the progression of bone tissue deposition.

(c) treating or monitoring treatment of the conditions cited in (b), or monitoring the progression of bone tissue deposition.

(c) treating or male osteoporosis, osteopenia, osteodystrophy, osteoporosis or male osteoporosis, osteopenia, osteodystrophy, osteoporosis or male osteoporosis, osteopenia, osteodystrophy, that involve altered bone metabolism (e.g. idiopathic juvenile osteoporosis), skeletal disease linked to breast cancer, mastocytosis, fancon, syddrome or fibrous dysplasia. The present sequence is that of an osteoplast differentiation associated CDNA marker of the invention.

(c) specification, but was obtained in electronic format directly from WIPO
                                                                             Use of genes and their expression profiles associated with osteoblast differentiation for screening modulators bone formation, for diagnosing or treating e.g. osteoporosis, or as markers for the differentiation

The invention relates to identifying (MI) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic constraint of the cell or cell membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, dentifying a compound that modulates taste signalling in taste cells.

(MI) is useful for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that binds to a taste cell specific ion channel subunit and for modulating taste signalling in taste cells of a mammal, in particular a human. Modulators identified by (MI) care used by the food and pharmaceutical industries to customize taste.

CC e.g. as additives to food or medicine so that the food or medicine tastes of ifferent to the subject who ingests it. Bitter medicines can be made to caste less bitter and sweet substance can be enhanced. The modulators are useful for pharmacological and genetic modulation of taste signalling bathways. The taste modulators can be enhanced. The modulators are subjects for modulation of taste in vivo. The present sequence is that of the human genomic region (Chromosome Ilpis-5) containing the ltrpc5 gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2

The Rhesus genes and continuous the Rhesus genes and continuous comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box(se), preferably the hybrid Rhesus box, the upstream Rhesus box and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the common RHD negative haplotypes. In D-negative
containing whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigen C; (4) assessing the risk of a RhD negative mother of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant women who are Rhesus D negative, where the foetus is not homozygous for the RHD gene to treat or prevent haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                      5;

The sequence represents the coding sequence of Rhesus gene locus: upstream Rhesus box of D positives. The Rhesus genes locus comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box and/or the downstream Rhesus box. The RHD and RHCE genes are located at chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the RHD deletion in the common RHD negative haplotypes. The sequence has been used to design primers which are useful for: (1) the specific detection of the common RHD positive haplotypes in D-negative individuals; (2) blood group typing; (3) determining whether a patient can be transfused with RhD negative blood and whether blood is suitable for transfusion to patients who should not be exposed to antigan c; (4) assessing the risk of a RhD negative mether of conceiving or carrying an RhD positive foetus. Anti-D antibodies are useful for treating pregnant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecular structure, useful for detection of common RHD positive haplotypes in D-negative individuals, comprises RHD, SMP1

```

```
The sequence represents the coding sequence of Rhesus gene locus:

downstream Rhesus box of D positives. The Rhesus genes locus

comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the

Rhesus box(es), preferably the hybrid Rhesus box, the upstream Rhesus box

chromosome 1 p34.1-p36. Rhesus box. The RHD and RHCE genes are located at

chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the

RHD deletion in the common RHD negative haplotypes. The sequence has

been used to design primers which are useful for: (1) the specific

detection of the common RHD positive haplotypes in D-negative

individuals; (2) blood group typing; (3) determining whether a patient

can be transfused with RhD negative blood and whether blood is suitable

for transfusion to patients who should not be exposed to antigen C: (4)

ssessing the risk of a RhD negative mother of concelving or carrying an

RHD positive foetus. Anti-D antibodies are useful for treating pregnant

women who are Rhesus D negative, where the foetus is not homozygous for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ŝ

The sequence represents the coding sequence of Rhesus gene locus:
hybrid Rhesus box of RHD negatives. The Rhesus genes locus
comprises the RHD, SMP1 and RHCE (all undefined) genes and/or the
RHD. SMP1 and RHCE (all undefined) genes and/or the
and/or the downstream Rhesus box. The RHD and RHCE genes are located at
chromosome 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 1 p34.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 2 p34.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 2 p4.1-p36. Rhesus box flanks the breakpoint region of the
CHTOMOSOME 2 p4.1-p36. Rhesus box flanks the breakpoint and the sequence has
CHTOMOSOME 2 p4.1-p36. Rhesus box flanks have mother of conceiving or carrying an
CHTOMOSOME 2 p4.1-p36. Rhesus b negative mother of conceiving or carrying an
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for
CHTOMOSOME 2 p4.1-p36. Rhesus D negative, where the foetus is not homozygous for the RHD gene to treat or prevent haemolytic disease of the newborn.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      'n

The invention relates to an isolated polynucleotide sequence which comprises a tachykinin receptor 1 (TACR1) isogene (SG) that is any one of 16 SG as given in specification, where each SG comprises specific regions of the TACRI genomic DNA appearating as ABK12169, and is defined by 26 years and a percentage as ABK12169, and is defined by 4601, 94831, 94892, 94960. Also included are fragments of the morphisms at positions (P) 3164, 3119, 3906, 4339, 4444, 92915, 94601, 94831, 94892, 94960. Also included are fragments of the morphisms at positions (P) 3164, 3119, 3906, 4339, 4444, 92915, 24601, 94831, 94892, 94960. Also included are fragments of the morphisms at computed by determining either the haplotype of one or both copies of the TACRI gene, predicting the haplotype pair for the TACRI gene of an individual by determining either the haplotype of one or both copies of the TACRI gene, predicting the haplotype pair for the isolated oligonuclectide for detecting the copies of the TACRI gene, predicting the haplotype pair for the isolated oligonuclectide for detecting the polymorphisms, a computer system for storing and analysing polymorphism of protein for use in screening for TACRI and expressing TACRI and fugus and function of TACRI and expressing morphisms and baplotype data is useful for taldating whether TACRI is a suitable target for drugs to treat pair. The allocating whether an clindal has one of the haplotype pairs. The haplotype data is useful for secenting for treating a specific condition or disease predicted to be associated with TACRI activity. The method is also useful for validating a compounds to treat a specific condition or disease predicted to be associated with TACRI activity. The methods are useful for identifying an associated with TACRI activity. The method is also useful for TACRI activity or a disease, staging of a disease, or tresponse to a drug. The pene for TACRI is located on human character and every propertion or disease predicted to be a true. The pene for TACRI is located on huma
                                                                                                                                                                                                                                                                                                                                                Novel isolated polynucleotide which is a polymorphic variant of tachykinin receptor 1 (TACR1) gene useful for expressing TACR1 protein isoform used in screening drug candidates to treat pain, depression,

                                                                                                                                                                                                      The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

The present invention describes an isolated peptide (I) consisting of an amino acid sequence selected from: (a) the amino acid sequence of a variant of the oestrogen receptor alpha (EST-alpha) protein in AAG68251; (c) the oestrogen receptor alpha (EST-alpha) protein in AAG68251; (d) a fragment comprising at least 10 contiguous amino acids of the protein in AAG68251. (I) has cytostatic, osteopathic, cardiant and vascince contaction. (I) is useful for identifying an agent that blinds to (I), by contacting (I) with an agent and assaying the contacted mixture to determine whether a complex is formed with the agent bound to the peptide. A polynucleotide (II), encoding (I), is useful in the development of diagnostics and therapies for diseases and disorders mediated/modulated by an oestrogen receptor (ER). (II) is also useful in gene therapy for tracating cancer, osteoporosis and cardiovascular giseases. The human ESR-alpha gene is located on chromosome 6. The present sequence represents the human ESR-alpha gene, which is given in the exemplification of the present invention.
                                                                       Novel variant of estrogen receptor alpha polypeptide useful for determining the biological activity of a protein for high throughput screening and for raising antibodies that elicit an immune response in
                                                                                                                                                                                                                                                                                                                                                                                             Human; oestrogen receptor alpha; ESR-alpha; ER; chromosome 6; Syne-2; synaptic nuclei expressed gene 2; haplotype; cytostatic; osteopathic; cardiant; vasotropic; gene therapy; vaccine; cancer; osteoporosis; cardiovascular disease; oestrogen receptor; ds.

AAD05121-AAD05203 represent cDNAs corresponding to 24 human secreted protein genes, and AAE01312-AAE0131 represent the proteins they encode. AAE01312-AAE01340 represent human secreted protein variants or fragments. The secreted proteins and their genes are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human secreted protein-encoding gene 14 cDNA clone HISBF60, SEQ ID NO:24.

ALDS, autoimmune diseases (e.g., Alzheimer's disease, allergies, neurological disorders (e.g., Alzheimer's disease, allergies, neurological disorders (e.g., Alzheimer's disease, allergies, neurological disorders (e.g., Alzheimer's disease, Parkinson's disease), cognitive disorders, schizophrenia, asthma.

Parkinson's disease, cognitive disorders, schizophrenia, asthma.

Strin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, anglogenic disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in allegnostic immunoassays e.g., radioimmunoassay or enzyme linked in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein-encoding CDNA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
24 genes, based on the tissues in which they are most highly expressed, and include developing products for the disquosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1599 GAACTTTGATCTTGAGAGAGATGATTTAGGGTATCTGGCTGAAGAAATTTCTAAGCAGCA 1658

The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        470
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            530

The present invention describes primer sets for synthesising 5602

(ull-length cDNAs defined in the specification. Where a primer set
comprises: (a) an oligo-dT primer and an oligouncleotide complementary
to the complementary strand of a polynucleotide which comprises one of
the 5602 nucleotide sequences defined in the specification, where the
coligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises a 3'-end sequence complementary to a
polynucleotide which comprises a 3'-end sequence of the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in
the specification. The primer sets can be used in antisense therapy and
in gene therapy. The primers are useful for synthesising polynucleotides,
particularly full-length cDNAs. The primers are also useful for the
connection and/or diagnosis of the abnormality of the full-length
cDNAs easily without any specialised methods. AAH03658 and
AAH13633 to AAH13642 represent human amino acid sequences; and AAH13629 to AAH13632
crepresent clinear in the exemplification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;
